

GT Time Workday Integration

GT Time for Workday's Time Tracking provides a secure, cloud-based, and highly manageable middleware connection between your Workday environment and our market-leading timeclocks -enabling real-time data sync, remote device management, and compliance enforcement at scale. GT Time meets Workday data management and feature requirements, but importantly, extends our extensive knowledge of timeclock feature capabilities to Workday customers and end-users.

Integration Overview

GT Time is a cloud-hosted middleware that provides a direct, two-way integration specifically between GT Clocks' timeclocks and Workday, which allows for secure, efficient, globally-capable management of time collection, data, and devices. Data flows between GT Clocks hardware, the GT Time middleware, and the Workday platform in real-time - using Workday's APIs to ensure a stable and reliable connection. Our clock application supports Workday functionality required to meet Time Tracking functionality as defined and specified by Workday for their customers.

Integration Details

Real-Time Data Synchronization

Allows instant access to time and attendance data within Workday - enabling informed decision-making regarding scheduling, labour costs, and compliance - directly from the timeclocks.

Simplified Employee Workflows

Empowers employees with self-service features like timesheet viewing, leave requests, and schedule management directly through the timeclock interface.

Enhanced Security and Compliance

Provides secure employee authentication options - including biometric and fingerprint recognition - and ensures data privacy compliance when used with GT Clocks biometric timeclocks.

Unified Platform for Workforce Management

Creates a unified platform by seamlessly integrating GT Clocks' timeclocks with Workday Time Tracking, streamlining workforce management processes. GT Time for Workday meets Workday's goals for data management while giving our customers the insight and control of clocks deployed in their environments - in ways that meet corporate goals and approved methodologies for direct employee verification using card media or biometrics.

Middleware-Driven Integration

The integration uses GT Time's secure, cloud-based middleware to manage the data flow and communication between timeclocks and Workday.

Technical Details: GT Time is a cloud hosted solution that integrates with Workday.
